Tire Science and Technology
Index to Volume 27
1999

Number	Months	Pages
1	Jan.–Mar.	1–60
2	Apr.–Jun.	61–126
3	Jul.–Sep.	127–204
4	Oct.–Dec.	205–284

A

Abrasion resistance
A laboratory device to measure the interfacial phenomena between rubber and rough surfaces (Garro, Gurnari, Nicoletto, and Serra), Oct.–Dec., 206
Araki, K.: *see* Sakai, H. and Araki, K.

B

Bakker, E.: *see* van Oosten, J. J. M., Unrau, H.-J., Riedel, A., and Bakker, E.

C

Ceresa, M.: *see* Mancosu, F., Speziari, D., Ceresa, M., and Sbarbati, P.
Coast down testing
An analytical model for the transient rolling resistance behavior of tires (Mars and Luchini), Jul.–Sep., 161
Contact pressure
Tire model to predict treadwear (Fujikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106
Curb impact
The effects of tire properties and their interaction with the ground and suspension on vehicle dynamic behavior—a finite element approach (Zhang and Hazard), Oct.–Dec., 227

D

Du, X.: *see* Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.
Du, X. W.: *see* Wei, Y.-T., Tian, Z.-H., and Du, X. W.
Durability
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2

E

Ebbott, T. G., Hohman, R. L., Jeusette, J.-P., and Kerchman, V.: Tire temperature and rolling resistance prediction with finite element analysis, Jan.–Mar., 2
Energy dissipation
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84

Energy loss
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2

F

Fatigue damage
Fatigue of unidirectional cord-rubber composites (Liu, Wan, Tian, Du, Jiang, and Yao), Jan.–Mar., 48
Fatigue life
Fatigue of unidirectional cord-rubber composites (Liu, Wan, Tian, Du, Jiang, and Yao), Jan.–Mar., 48
Fatigue testing
Fatigue of unidirectional cord-rubber composites (Liu, Wan, Tian, Du, Jiang, and Yao), Jan.–Mar., 48
Finite element analysis
A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84
The effects of tire properties and their interaction with the ground and suspension on vehicle dynamic behavior—a finite element approach (Zhang and Hazard), Oct.–Dec., 227
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2
Footprint
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Footprint displacements
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Footprint stresses
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Force and moment
Standardization in tire modeling and tire testing—TYDEX workgroup, TIME project (van Oosten, Unrau, Riedel, and Bakker), Jul.–Sep., 188
Fracture
A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
Friction
A laboratory device to measure the interfacial phenomena between rubber and rough surfaces (Garro, Gurnari, Nicoletto, and Serra), Oct.–Dec., 206
Frictional heat
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe slid-

ing of a tire (Sakai and Araki), Jan.–Mar., 22
Fujikawa, T., Uchiyama, Y., and Yamaguchi, I.: Tire model to predict treadwear, Apr.–Jun., 106

G

Garro, L., Gurnari, G., Nicoletto, G., and Serra, A.: A laboratory device to measure the interfacial phenomena between rubber and rough surfaces, Oct.–Dec., 206
Gurnari, G.: *see* Garro, L., Gurnari, G., Nicoletto, G., and Serra, A.

H

Handling simulation
A new methodology to get reliable input data for handling simulations (Mancosu, Speziari, Ceresa, and Sbarbati), Jul.–Sep., 176
Hazard, C.: *see* Zhang, Y. and Hazard, C.
Heat buildup
An analytical model for the transient rolling resistance behavior of tires (Mars and Luchini), Jul.–Sep., 161
Heat generation
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2
Hohman, R. L.: *see* Ebbott, T. G., Hohman, R. L., Jeusette, J.-P., and Kerchman, V.
Homogenization
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84

J

Jeusette, J.-P.: *see* Ebbott, T. G., Hohman, R. L., Jeusette, J.-P., and Kerchman, V.
Jiang, J.: *see* Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.

K

Kabe, K.: *see* Shida, Z., Koishi, M., Kogure, T., and Kabe, K.
Kadowaki, H.: *see* Nakajima, Y., Kadowaki, H., Kamegawa, T., and Ueno, K.
Kalman filter
A new methodology to get reliable input data for handling simulations (Mancosu, Speziari, Ceresa, and Sbarbati), Jul.–Sep., 176
Kamegawa, T.: *see* Nakajima, Y., Kadowaki, H., Kamegawa, T., and Ueno, K.
Kerchman, V.: *see* Ebbott, T. G., Hohman, R. L., Jeusette, J.-P., and Kerchman, V.
Kogure, T.: *see* Shida, Z., Koishi, M., Kogure, T., and Kabe, K.
Koishi, M.: *see* Shida, Z., Koishi, M., Kogure, T., and Kabe, K.

L

Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.: Fatigue of unidirectional cord-rubber composites, Jan.–Mar., 48

Luchini, J. R.: *see* Mars, W. V. and Luchini, J. R.

M

Malwear
  Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128

Mancosu, F., Speziari, D., Ceresa, M., and Sbarbati, P.: A new methodology to get reliable input data for handling simulations, Jul.–Sep., 176

Mars, W. V. and Luchini, J. R.: An analytical model for the transient rolling resistance behavior of tires, Jul.–Sep., 161

McIntyre, J. E.: *see* Pottinger, M. G. and McIntyre, J. E.

N

Nakajima, Y., Kadowaki, H., Kamegawa, T., and Ueno, K.: Application of a neural network for the optimization of tire design, Apr.–Jun., 62

Neural network
  Application of a neural network for the optimization of tire design (Nakajima, Kadowaki, Kamegawa, and Ueno), Apr.–Jun., 62

Nicoletto, G.: *see* Garro, L., Gurnari, G., Nicoletto, G., and Serra, A.

O

Optimization
  Application of a neural network for the optimization of tire design (Nakajima, Kadowaki, Kamegawa, and Ueno), Apr.–Jun., 62

P

Pottinger, M. G. and McIntyre, J. E.: Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires, Jul.–Sep., 128

R

Riedel, A.: *see* van Oosten, J. J. M., Unrau, H.-J., Riedel, A., and Bakker, E.

Rolling loss
  A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
  An analytical model for the transient rolling resistance behavior of tires (Mars and Luchini), Jul.–Sep., 161

Rolling resistance
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2
Rubber
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22
Rubber composites
Fatigue of unidirectional cord-rubber composites (Liu, Wan, Tian, Du, Jiang, and Yao), Jan.–Mar., 48

S

Sakai, H. and Araki, K.: Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire, Jan.–Mar., 22
Sbarbati, P.: *see* Mancosu, F., Speziari, D., Ceresa, M., and Sbarbati, P.
Serra, A.: *see* Garro, L., Gurnari, G., Nicoletto, G., and Serra, A.
Shear energy intensity
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Shida, Z., Koishi, M., Kogure, T., and Kabe, K.: A rolling resistance simulation of tires using static finite element analysis, Apr.–Jun., 84
Skid marks
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22
Slide
Tire model to predict treadwear (Fujikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106
Slip
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Tire model to predict treadwear (Fujikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106
Speziari, D.: *see* Mancosu, F., Speziari, D., Ceresa, M., and Sbarbati, P.
Standardization
Standardization in tire modeling and tire testing—TYDEX workgroup, TIME project (van Oosten, Unrau, Riedel, and Bakker), Jul.–Sep., 188

T

Temperature
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22
Tire temperature and rolling resis-

tance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2
Temperature distribution
A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
Tian, Z.: *see* Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.
Tian, Z.-H.: *see* Wei, Y.-T., Tian, Z.-H., and Du, X. W.
Tire
A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
A new methodology to get reliable input data for handling simulations (Mancosu, Speziari, Ceresa, and Sbarbati), Jul.–Sep., 176
Application of a neural network for the optimization of tire design (Nakajima, Kadowaki, Kamegawa, and Ueno), Apr.–Jun., 62
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84
Standardization in tire modeling and tire testing—TYDEX workgroup, TIME project (van Oosten, Unrau, Riedel, and Bakker), Jul.–Sep., 188
The effects of tire properties and their interaction with the ground and suspension on vehicle dynamic behavior—a finite element approach (Zhang and Hazard), Oct.–Dec., 227
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22
Tire model to predict treadwear (Fujikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106
Tire temperature and rolling resistance prediction with finite element analysis (Ebbott, Hohman, Jeusette, and Kerchman), Jan.–Mar., 2
Traction
A laboratory device to measure the interfacial phenomena between rubber and rough surfaces (Garro, Gurnari, Nicoletto, and Serra), Oct.–Dec., 206
Transient rolling resistance
An analytical model for the transient rolling resistance behavior of tires (Mars and Luchini), Jul.–Sep., 161
Tread
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22
Tire model to predict treadwear (Fujikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106
Treadwear
A laboratory device to measure the interfacial phenomena between rubber and rough surfaces (Garro, Gurnari, Nicoletto, and Serra), Oct.–Dec., 206
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Tire model to predict treadwear (Fu-

jikawa, Uchiyama, and Yamaguchi), Apr.–Jun., 106

U

Uchiyama, Y.: *see* Fujikawa, T., Uchiyama, Y., and Yamaguchi, I.
Ueno, K.: *see* Nakajima, Y., Kadowaki, H., Kamegawa, T., and Ueno, K.
Uneven wear
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Unrau, H.-J.: *see* van Oosten, J. J. M., Unrau, H.-J., Riedel, A., and Bakker, E.

V

van Oosten, J. J. M., Unrau, H.-J., Riedel, A., and Bakker, E.: Standardization in tire modeling and tire testing—TYDEX workgroup, TIME project, Jul.–Sep., 188
Vehicle dynamics
A new methodology to get reliable input data for handling simulations (Mancosu, Speziari, Ceresa, and Sbarbati), Jul.–Sep., 176
Standardization in tire modeling and tire testing—TYDEX workgroup, TIME project (van Oosten, Unrau, Riedel, and Bakker), Jul.–Sep., 188
The effects of tire properties and their interaction with the ground and suspension on vehicle dynamic behavior—a finite element approach (Zhang and Hazard), Oct.–Dec., 227
Virtual crack closure technique
A finite element model for the rolling loss prediction and fracture analysis of radial tires (Wei, Tian, and Du), Oct.–Dec., 250
Virtual wear
Effect of suspension alignment and modest cornering on the footprint behavior of performance tires and heavy duty radial tires (Pottinger and McIntyre), Jul.–Sep., 128
Viscoelasticity
A rolling resistance simulation of tires using static finite element analysis (Shida, Koishi, Kogure, and Kabe), Apr.–Jun., 84
Vulcanization
Thermal engineering analysis of rubber vulcanization and tread temperatures during severe sliding of a tire (Sakai and Araki), Jan.–Mar., 22

W

Wan, Z.: *see* Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.
Wei, Y.-T., Tian, Z.-H., and Du, X. W.: A finite element model for the rolling loss prediction and fracture analysis of radial tires, Oct.–Dec., 250
Wheels of Fortune: The story of rubber in Akron, Book review, Jan.–Mar., 58

Y

Yamaguchi, I.: *see* Fujikawa, T., Uchiyama, Y., and Yamaguchi, I.
Yao, M.: *see* Liu, Y., Wan, Z., Tian, Z., Du, X., Jiang, J., and Yao, M.

Z

Zhang, Y. and Hazard, C.: The effects of tire properties and their interaction with the ground and suspension on vehicle dynamic behavior—a finite element approach, Oct.–Dec., 227
